NEW Model Breakers

Breaker Technology, Inc. (formerly Teledyne Specialty Equipment) is pleased to introduce the new "M" series of hydraulic hammers in the 350 through 850 ft/lb class. The "M" series of breakers will still deliver the same field proven features and benefits as our "E" series breakers.

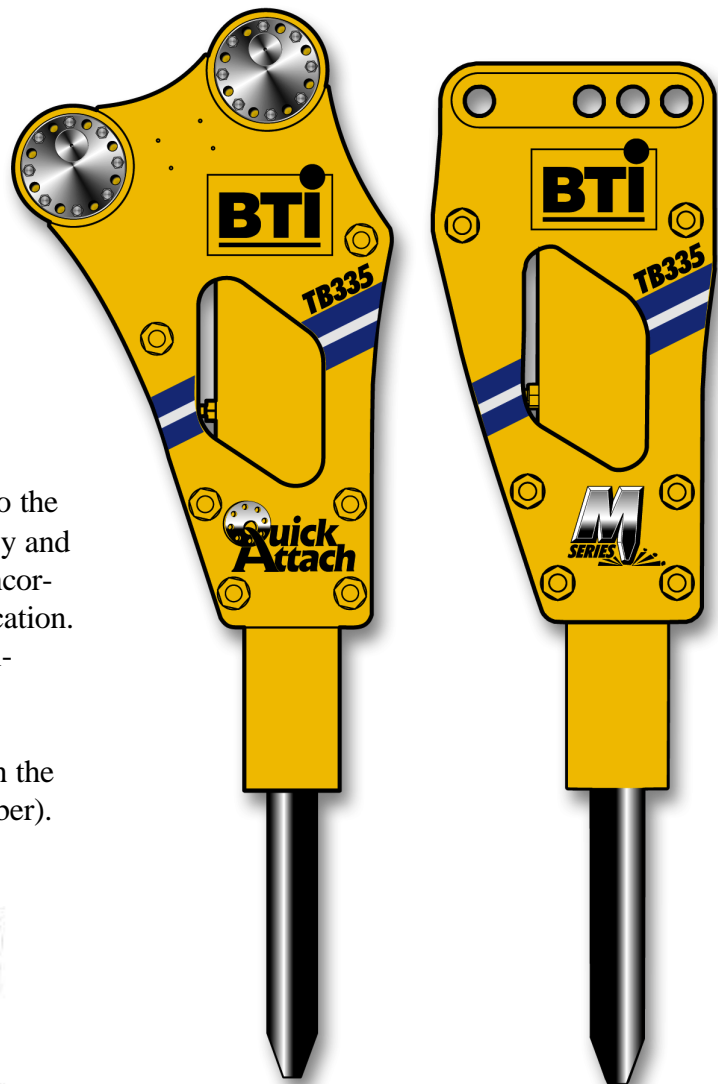

The new models will be available with ME mounting plates which can exchange from skid steer to mini-excavators without modification. BTI's exclusive Quick Attach style mounts for the TB285 and TB335 provide easy installation on backhoes with OEM quick couplers. Both the ME and Quick Attach side plates will accommodate "E" series breakers, and replace the previous CM style side plates.

New Model	Serial No. Prefix
TB135ME	- 2M
TB235ME	- 3M
TB285ME & TB285QA	- 4M
TB335ME & TB335QA	- 5M

New Features:

The new models have the control valve built-in to the main cylinder body, providing improved efficiency and blow energy, based on CIMA testing data. Also incorporated is a separate protected port for auto-lubrication. Auto-Lube packages are available to fit your mini-excavator, skid steer loader or backhoe loader.

All parts are interchangeable with "E" series (with the exception of the cylinder body and cushion chamber).
